

VISICOM 4000 ADVANCED FEATURES

Pertains to all 3 models, Standard, Extended and Pro

COMPLETELY RELIABLE RF COMMUNICATIONS

New radio-based VisiCom 4000 works without room-to-room wiring in even the toughest environments. Older buildings, buildings with split power services, or the use of other RF equipment pose no problem for wireless communications with VisiCom 3000, guaranteed.

INDIVIDUAL PERSONAL TONES

Choose from among various tones or assign different tones to different people. With personalized chime tones, you can recognize your messages without having to look at VisiCom's display, and without diverting your attention from the task at hand.

ONE-BUTTON MESSAGE CANCEL

Use of the bottom row End buttons has been enhanced to allow message cancellation simply by pressing the button below your assigned Call button. There's no need to scroll through the message queue to respond to and cancel a message. Message response is instantaneous.

COME HERE...OR MEET ELSEWHERE

Units are no longer limited to one room designation. If you need to page staff members to meet at some other location, or if you need a central location that can direct staff to various locations, each bottom row button can be assigned a room designation of your choosing.

EXTERNAL POWER CUBE

A miniature wall cube power supply eliminates the only heat producing component from VisiCom's interior. Units are cool to the touch, and product life is extended as a result. The tiny external power supply also makes it easy to reset the unit if needed and enhances powerline surge protection.

WORLDWIDE AGENCY ACCEPTANCE

Wall cube power supplies are available to meet worldwide power specifications for 110 or 220 volts, 50 or 60 Hertz, and with every available international plug style. They carry worldwide agency acceptance including UL, CSA and CE.

FRONT PANEL CONTROLS

Added front panel buttons allow users to reset any VisiCom unit in the event of a power disruption without disturbing any of VisiCom's programmed settings; particularly handy for built-in units. Enhanced access is provided to programmed settings, and a new tone demonstration mode lets you select from VisiCom's set of distinctive tones.

PLUG IN RF BOOSTER

An inexpensive wireless plug-in RF booster is available for installations spanning multiple floors or where remote units are further than fifty to sixty feet away from other units.
