VISICOM

CHIME OPTIONS

ROOM-BY-ROOM
VOLUME ADJUSTMENT

Each VisiCom unit has a volume knob which can be set anywhere from quite load to completely silent. Typically, the volume in the exam room is set to a volume that is barely perceptible to the provider thus unnoticed by the patient, and units in noisy areas are turned up louder.

PLEASING
CHIME TONES

Each VisiCom unit has a selection of eight pleasing and distinctive chime tones from which to choose. Some tones are soothing and subtle, others are more apt to get someone's attention. Activate VisiCom's chime demonstration mode to select the preferred tone to suit your practice.

PERSONAL
PROGRAMMABLE TONES

If you wish, you can program any one of the eight available tones for each button, or program silence. For example, the doctor can be assigned a tone which is readily distinguished from other providers, and can thus recognize his or her messages without the need to even glance at the message display, so there's no distraction.

AUTOMATIC
RECHIMING

Press any Call button a second time for emphasis or three times in an urgent situation. A second button press changes the display appearance and programs the message to rechime every minute or so, each time it reappears in the sequential display of multiple messages. Messages sent with three-press urgency flash and chime without interruption until they're cleared.

MULTIPLE
CHIME RESTRICTIONS

VisiCom *Chime Restriction* is a major advance in the art of office paging. Without it, practices often complain they can't get the doctor's attention with their paging systems. The necessity to look at the pager every time *anyone* gets paged often proved too distracting. With sixty or seventy pages a day, some physicians found they had to "tune out" messages to get by.

Unlike paging systems that make everyone look every time anyone gets a message, VisiCom provides room-by-room programmable chime restrictions. In one room, for example, the unit could be programmed to chime only for the doctor. In another room, it could be programmed to chime only for some other provider, or other providers (multiple restrictions are possible in each room) and so on.
